

HydraLIST™

HydraLIST™ Stocklisting Software

Hydratec's stocklisting programs have been industry leaders for more than 25 years. HydraLIST has been in use by fabricators and contractors the world over. No other package has as much flexibility or as much use in the field.

HydraLIST is compatible with all current Windows versions.

Features

- Completely customizable—build your own kits and sub-assemblies for hangers, valves, drains, or whatever
- Add and update prices easily—either use simple spreadsheet, or one of our wizards
- Creates either horizontal or vertical weld sketches
- Scrap minimization—efficiently cut pipe, saving material costs
- Thousands of report formats—if we don't have yours, we can make it
- Weather-Proof Thermal or Conventional paper pipe labels
- Interfaces with your existing accounting and inventory programs
- Windows NT® and Windows 2000® network compatible
- Calculates material and labor costs, even shipping weight!
- Input list in Metric for design and have it print out in English for fabrication
- Input directly or automatically through our HydraCAD™ design package
- Customizable buttons let you add control buttons to the input program
- Ability to batch process many jobs at once
- Many ways to input – use mouse, keyboard, Fast Buttons or TenKey keypad
- Email stocklist to one of dozens of fabricators using HydraLIST
- Ad hoc lists of materials can be saved, loaded and altered to provide dynamic assemblies for such things as system risers, standpipes, etc.
- Project wizard allows a single input to serve multiple fabrication standards
- HydraLIST has been used by contractors and fabricators for more than 25 years

18	86	3	NO FITTING	0						

The HydraLIST input screens are simple and intuitive—you can see all the information right in front of you. Input Mains, Lines and Hangers. Add loose material using a simple Find routine which will scan your database by part number or text match.

HydraLIST input is simple and flexible. Use the keyboard, the mouse, the TenKey keypad or the Fast Buttons to put in your information.

Fast Buttons can be customized and programmed by you to do what you want. You can program the buttons to input fittings and instructions so that you can stocklist more efficiently.

HydraLIST is delivered with hundreds of printout options. Weld sketches, hanger cut lists, make-on lists, pipe optimization, labels, pricing and summaries are all included with HydraLIST. If you do not see a printout you need, we can create it.

If you fabricate with one of the many fabricators using HydraLIST, you can email them the input for quicker results. They can even print it out the way they want.
